

TABLE IV

SELECTED SOURCE-ONLY CROSS-DOMAIN GAIT RECOGNITION RESULTS (%). REPEATED REPORTS UNDER MATCHING SETTINGS ARE CONSOLIDATED BY TAKING THE HIGHER VALUE PER CELL.

A. Transfer across training datasets and clothing conditions Rank-1 accuracy

S: silhouette; R: RGB; CL: clothing change; “—”: not reported in the selected comparison. Part A takes the higher reported value for matching method, input, training/test dataset and metric; individual source records remain online. BigGait and BiggerGait use DINOv2-S (ungrouped BiggerGait); DenoisingGait uses a Stable Diffusion prior; GaitMax uses pretrained visual features and GCaption supervision. *Resegmented CASIA-B; [‡]GaitMax retains its source’s CASIA-B label. [†]Custom GREW subset: 1,000 identities, 1,000 query and 4,095 gallery sequences.

HRNet poses; source-reproduced baselines.

GREW uses the standard 6,000-identity test split.
